

Updates and Errata for the Practice Exams

I will post updates and errata for the 2010 version of the Practice Exams here.

The following correction is for the older versions:

Exam 3, Question #9 should read, "A computer is turned on every day at 9 a.m. and turned off at 9 p.m. Every day, given that it is working at 9 a.m., the probability that it will break down before 9 p.m. is 0.1. If it is functioning just before it is shut down at 9 p.m., then it is certain to be functioning the next day at 9 a.m."
